

Roheedat Ahmed

Indianapolis, Indiana

SUMMARY

I have been working in AI data work for about three years, mostly focused on training and evaluating language models. My day-to-day involves writing prompts, reviewing model responses, and flagging outputs that miss the mark on accuracy, tone, or safety. I am also comfortable writing Python scripts to speed up repetitive parts of that workflow. I pay close attention to detail, I take instructions seriously, and I hold my work to a high standard before submitting.

CORE COMPETENCIES

Prompt Engineering	RLHF / RLAIF Feedback	LLM Output Evaluation	Red-Teaming & Safety
Python Scripting	SQL & Data Querying	Data Annotation / NER	QA & Bias Detection

TECHNICAL SKILLS

Languages	Python, SQL, Bash, JavaScript (basic), JSON and YAML
AI / ML	OpenAI API, Hugging Face Transformers, LangChain, scikit-learn, NLTK, spaCy
Annotation Tools	Scale AI, Appen, Surge AI, Labelbox, Label Studio, Amazon MTurk, Remotasks
Data Tools	Pandas, NumPy, Jupyter Notebook, Google Colab, Excel
Eval Methods	RLHF, RLAIF, preference ranking, rubric scoring, output comparison
NLP Concepts	Tokenization, embeddings, sentiment analysis, NER, summarization, classification
Version Control	Git and GitHub — branching, pull requests, collaborative review
Environments	Windows 10/11, Ubuntu Linux (command line), VS Code

PROFESSIONAL EXPERIENCE

AI Training Specialist (Freelance)

Jan 2023 – Present

Outlier AI / Scale AI · Remote — Indianapolis, IN

- Evaluate prompt-response pairs each month, scoring outputs on relevance, accuracy, tone, and safety using the client's rubric guidelines.
- Write training prompts across different subject areas — including general knowledge, coding tasks, and writing — to help cover gaps in the model's training data.
- Built a small Python script that sends prompts to the OpenAI API in batches and saves the scores to a spreadsheet, which cut down the time I spend on manual logging.

- Run adversarial tests to look for outputs that could be harmful or misleading, then write up structured notes for the QA team.
- Work with other reviewers to stay aligned on scoring guidelines, keeping agreement rates consistently high across the team.
- Review AI-generated code in Python and JavaScript, checking for logic errors, missing edge cases, and unclear documentation.

Data Annotator & QA Reviewer

Mar 2022 – Dec 2022

Appen (Contract) · Remote — Indianapolis, IN

- Labeled text, image, and audio datasets across multiple client projects, consistently meeting or exceeding the required quality threshold.
- Worked across different annotation task types including NER tagging, sentiment labeling, and dialogue classification.
- Reviewed peer annotations and wrote feedback notes that helped reduce recurring errors in the wider team.
- Wrote a Python script to clean up annotation export files and flag unusual entries before final submission — saved a noticeable amount of rework time each week.
- Completed Appen's internal certification for NLP and Vision, qualifying for higher-complexity project assignments.

Junior Data Analyst (Internship)

Jun 2021 – Feb 2022

TechBridge Indiana · Indianapolis, IN

- Wrote SQL queries to clean and pull data for client-facing dashboards used to track program outcomes.
- Built analysis notebooks in Jupyter using Pandas and Matplotlib to summarize survey results for program managers.
- Helped build a basic text classifier using scikit-learn to sort incoming support tickets by priority level.
- Wrote documentation for internal workflows that made it easier for new team members to get up to speed.

PROJECTS

Prompt Quality Review Tool

Python · OpenAI API · Pandas

- A command-line script that sends a set of prompts to the API and scores each response across five categories, then exports a review queue as a CSV file.
- Helped me move through QA work faster by surfacing the weakest responses first, so I could focus my attention where it was most needed.

Annotation Agreement Tracker

Python · Google Sheets API · Jupyter Notebook

- A notebook that reads exported annotation logs and calculates inter-annotator agreement scores, then pushes results to a shared Google Sheet for the team to see.

LLM Bias Testing Notes

Python · Hugging Face Transformers

- A personal project where I ran structured prompts through open-source models to look for patterns in biased or inconsistent outputs, and kept notes on what I found.

EDUCATION

B.S. Computer Information Systems

May 2021

*Indiana University – Purdue University Indianapolis (IUPUI) ·
Indianapolis, IN*

- Relevant coursework: Database Systems, Data Structures, Introduction to Machine Learning, Business Intelligence, Technical Writing.
- Capstone project: Built a sentiment analysis tool for social media data using Python and presented findings to a faculty panel.

CERTIFICATIONS

- | | |
|--|------|
| • DeepLearning.AI — ChatGPT Prompt Engineering for Developers (Coursera) | 2024 |
| • Google — Crash Course on Python (Coursera) | 2023 |
| • DataCamp — Data Analyst with Python Track | 2023 |
| • IBM — AI Foundations for Everyone (Coursera) | 2022 |
| • Appen Certified Annotator — NLP & Computer Vision | 2022 |
| • HackerRank — SQL (Advanced) Certificate | 2021 |

ADDITIONAL NOTES

- Strong written English — helpful for writing precise evaluation notes and annotation guidelines.
- Comfortable working fully remote with distributed teams across different time zones.
- Familiar with content policy work, safety classification, and responsible AI guidelines.
- Attentive to detail and comfortable sitting with repetitive, precision-focused tasks for long stretches.
